BC12-10, a novel anti-apoptotic member of the Bc1-2 family,
blocks apoptosis in the mitochondria death pathway but not in
death receptor pathway
Hum. Mol. Genet. 10 (21), 2329-2339 (2001)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTE: This record contains 192 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows

                                                                                                                                                                                                                                                                                                                                                                                                                  NOTE: This record contains 192 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (bases 1 to 214669)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Bases 1-321 are 95% homologous (Blast) to bases 566-886 of NM 020396.2. Primers were chosen to amplify genomic DNA in the region of BCL2L10. As human sequence was used to design the primers, the primer sequences are not included in the rhesus sequence provided below. To obtain additional information regarding primers or clones contact: Dr. Robert Norgren; Dept of Genetics, Cell Biology & Anatomy; University of Nebraska Medical Center; 986395 Nebraska Medical Center; Omaha, NE 68198.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to human member of Bcl-2 family Bcl-B protein and its corresponding nucleic acid. Bcl-B is useful in treating a subject having or at risk of a disorder associated with apoptosis, such as cell degenerative or proliferative disorder like neural or muscle degeneration, e.g. Alzheimer's disease, Creutzfeldt-Jacob's disease (CJD), Machado-Joseph disease (MJD), Parkinson's disease, Huntington's disease (HD), spinocerebellar ataxias 1, 2 and 6 (SCA-1, -2 and -6), dentatorubropallidoluysian atrophy (DRPLA), Kennedy's disease, stroke, ischaemia, head trauma, neoplasia, autoimmune disorder or fibrotic condition. The transgenic animals are used as in vivo models to study apoptosis and potential therapies for apoptosis. The present sequence is human Bcl-B DNA. Bcl-B gene is located at chromosome 15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      treating a disorder associated with apoptosis, such as cell degenerative or proliferative disorder e.g. cancer, Alzheimer's disease or Parkinson's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Local

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ş
This sequence represents the hydrophobic domain containing protein, clone CC HP00631 nucleotide sequence. The sequence is isolated from a human contains nucleotide sequence. The sequence is isolated from a human contains nucleotide sequence. The sequence is isolated from a human contains one putative public domain. The protein shows homology to the japanese quail apoptosis regualtor NR-13. The invention relates to human proteins with containing or proteins with proteins are predicted to have biological activities of the polynical activity intritional source or supplement); cytokine and conditions in humans and animals. Suggested activities include conditions in citivity (nutritional source or supplement); cytokine and cell proliferation/differentiation activity; immune stimulating (e.g. as vaccines) or suppressing activity (e.g. to treat various immune cell deficiencies such as SCIDS or HTV, connective tissue disease, systemic conformation, Guillain-Barre syndrome, autoimmune thyroiditis, insulin cepsule condition, Guillain-Barre syndrome, autoimmune thyroiditis, insulin congenies in transplantation); haematopoiesis regulating activity (e.g. in treatment of myeloid or lymphoid cell deficiencies); tissue growth activity (e.g. wound healing and tissue repair, ulcers, burns, consective tissue disease); activity (e.g. activity; chemotactic/chemokinetic periodontal disease); activin/inhibin activity; chemotactic/chemokinetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cell proliferation; immune stimulant; immune deficiency; tumour; pain; rheumatoid arthritis; insulin dependent diabetes mellitus; fertility; myasthenia gravis; haematopoiesis regulator; tissue growth; depression; anti-inflammatory; infection; bodily characteristic; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Hydrophobic domain; cell proliferation;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               activity; haemostatic and thrombolytic activity (e.g. treating haemophilias); receptor/ligand activity; anti-inflammatory activity; and tumour inhibition activity. The polymucleotides are also stated to be useful for gene therapy. Other activities include inhibiting infections caused by bacteria, fungi, viruses and other parasites (e.g. Hepatitis, malaria); effecting bodily characteristics such as, e.g. weight, colour, skin, effecting biorhythms or caricadic cycles; enhancing fertility; treatment of depression; treatment of pain; hormonal or endocrine activity. The polynucleotides may also be used for recombinant expressio of the protein

                                                                                This sequence represents the hydrophobic domain containing protein, clone CC cancer cell line. The H902403 protein contains one putative transmembrane CC cancer cell line. The H902403 protein contains one putative transmembrane CC cancer cell line. The protein shows homology to the japanese quail apoptosis CC regnaltor NR-13. The invention relates to human proteins with hydrophobic CC domains, the DNA and the CDNA encoding them. The polymucleotides and CC proteins are predicted to have biological activities which make them CC suitable for treating, preventing or ameliorating medical conditions in CC humans and animals. Suggested activity; inmune stimulating (e.g. as CC vaccines) or suppressing activity; inmune stimulating (e.g. as CC vaccines) or suppressing activity; into treat various immune conditions in CC proliferation/differentiation activity; into treat various immune such as SCIDS or HIV, connective tissue disease, systemic confidencies such as SCIDS or HIV, connective tissue disease, systemic condendent diabetes mellitus, myasthenia gravis graft-versus-host disease and call captivity (e.g. wound healing and tissue regulating activity (e.g. in treatment of myeloid or lymphoid cell deficiencies); tissue growth captivity; haemostatic and thrombolytic activity; chemotactic/chemokinetic captivity; haemostatic and thrombolytic activity; chemotactic/chemokinetic captivity; haemostatic and thrombolytic activity; chemotactic/chemokinetic caused by bacteria, fungi, viruses and other parasites (e.g. Hepatitis, captivity); because the protein producted in the protein production activity characteristics such as, e.g. weight, colour, treatment of depression; treatment of pain; hormonal or endocrine cof the protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Kato

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      C? The invention provides nucleic acid molecules (NAMI) encoding 4 human Bcl c? -like polypeptides (PEP1). The NAMI and PEP1 may be used in the CC prevention, diagnosis and treatment of diseases associated with the CC inappropriate Bcl-2-like polypeptides' expression. The NAMI may be used CC inappropriate Bcl-2-like polypeptides expression and artice in the CC methodolgy. The polypeptides may also be used as antigens in the CC production of antibodies against Bcl-2 and in assays to identify CC modulators of Bcl-2 expression and activity. The anti-Bcl-2 antibodies and antagonists may be used to down regulate expression and activity. The anti-Bcl-2 antibodies CC and anti-Bcl antibodies may also be used as diagnostic agents for detecting CC immunosorbant assay (ELISA). Disorders that may be prevented, diagnosed CC immunosorbant assay (ELISA). Disorders that may be prevented, diagnosed CC and/or treated by the above methods include, immunodeficiencies (e.g. a cc gammaglobulinemia and B cell lymphoproliferative disorder), autoimmune CC disorders (e.g. rheumatoid arthritis and Grave's disease), altergic CC reactions, inflammations, respiratory diseases and cardiovascular CC disorders (a full list of disorders is given in the specification). The CC present sequence represents a human Bcl-2-like polypeptide encoding cDNA

The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of diseases associated with connective tissue(s), including cancer. The polynucleotide sequences of the invention are also useful in gene therapy. ABK41613-ABK42101 represent cDNA sequences encoding the novel human connective tissue related polypeptides. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 548
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 4; SEQ ID NO 311; 673pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     BP
```

```
The invention describes an isolated nucleic acid molecule (I), which comprises a sequence that is at least 95 % identical to a connective tissue-related polynucleotide encoding connective tissue antigens (CTA). The polypeptide or polynucleotide is useful for preventing, treating, or ameliorating medical conditions in a mammal. The connective tissue polypeptides, polynucleotides and antibodies are particularly useful for treating, preventing and/or prognosing disorders of connective tissues (e.g. rheumatoid arthritis, discoid and systemic lupus erythematosus, scleroderma, or Sjogren's Syndrome), cancers, cancer metastases and/or neoplasias (e.g. leukaemia), neurodegenerative disorders (e.g. Alzheimer's disease, or Parkinson's disease), cardiovascular diseases (e.g. atherosclerosis, myocarditis or cardiopulmonary bypass complications), autoimmune diseases (e.g. systemic lupus erythematosus, rheumatoid arthritis, or multiple sclerosis), allergic reactions (e.g.

This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a CC genomic sample of DNA. The sample is treated chemically to convert CC cytosine (C) but not methylated C, to uracil, then part of the genomic CDNA that contains the target C is amplified to form a labeled amplicon. CC The amplicon is hybridised to two classes, each with at least one member, CC of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the CC degree of hybridisation to both classes is determined from the label on CC oligomers, the degree of methylation is calculated. The method is used: CC oligomers, the degree of methylation is calculated. The method is used: CC oligomers, cardiovascular, gastrointestinal and respiratory systems etc., CC particularly by detecting mutations or side effects of therapeutic drugs CC nervous, cardiovascular, gastrointestinal and respiratory systems etc., CC particularly by detecting mutations or single nucleotide polymorphisms CC (SNP's); and (ii) for differentiation of cell or tissue types and for crowstigating cell differentiation. The method allows the methylation CC status of many C residues to be determined simultaneously. ABQ13410-CC ABQ54121 represent genomic DNA sequences used to illustrate the method CC disclosure of the invention member,

This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert CC cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, co of oligonuclectides and/or peptide-nucleic acid (PNA) oligoners and the correct of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of coligoners, the degree of methylation is calculated. The method is used:

(i) for diagnosis and/or prognosis of side effects of therapeutic drugs are of a wide range of diseases, e.g. cancer, disorders of the central concervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SPF's); and (ii) for differentiation. The method allows the methylation status of many C residues to be determined simultaneously. ABBJ3410-ABBJ411 represent genomic DNA sequences used to illustrate the method for the corribed in the method corribed in the method in the met

This invention describes a novel method for determining the degree of methylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc.,

Determining the degree of cytosine diagnosis and prognosis, comprises

methylation in genomic DNA, useful for selective hybridization of amplicons

chemically treated

DNA.

Claim 12; 56pp + Sequence Listing; 56pp; German.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in the disclosure of the invention

```
This invention describes a novel method for determining the degree of comethylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonuclectides and/or peptide-nucleic acid (PNA) oligoners and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of cityomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs cand of a wide range of diseases, e.g. cancer, disorders of the central corrous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation contents to be determined simultaneously. AB013410-
ABQ54121 represent genomic DNA sequences used to illustrate for determining the degree of cytosine methylation described disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Determining the degree of cytosine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2002-371829/40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          01-SEP-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                             The invention relates to a novel array comprising at least two isolated CC nucleotide molecules, each molecule having a sequence capable of uniquely CC hybridising to a nucleic acid molecule which is an expression product of cc a gene involved in mitochondrial biology. The array comprises two or more isolated nucleic acid molecules or spots, each molecule having a sequence CC chosen from sequence of 994 human probes and 2046 mouse probes. An array CC with the sample under conditions allowing selective hybridisation, and CC measuring hybridisation of nucleic acid in the sample to the array to CC produce an expression profile. The array is also useful for determining CC an expression profile of a first labelled sample containing nucleic acid crelative to a second sample is a reference or a standard. An array is useful for determining an expression profile diagnostic of an energy-metabolism CC relative to a second sample is a reference or a standard. An array is useful for determining an expression profile diagnostic of an energy-metabolism CC contest the physiological condition. An array of the invention is useful for determining mitochondrial biology gene expression profiles of organisms, which are useful for determining micoandition. An array of the invention is useful couch as human, mice and closely related species, tissue and organs of couch as summan, mice and closely related species, tissue and organs of couch account which are useful for determining expression profiles containing expressi
                                                                      diagnosing such physiological conditions, identifying biochemical pathways, genes, and mutations involved in such physiological conditions, identifying therapeutic agents useful for preventing and/or treating such physiological conditions, evaluating and/or monitoring the efficacy of such therapies, and creating and identifying animal models of human energy metabolism-related physiological conditions. An array is also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Array containing probes for genes involved in mitochondrial biology, useful for determining mitochondrial biology gene expression profiles use in diagnosing pathologies and identifying biochemical pathways.
useful for defining expression signatures or profiles for mitochondrial diseases, as well as distinguishing clinical disorders that result from oxidative phosphorylation (OXPHOS) dysfunction, oxidative stress,
